## Child-to-parent Intergenerational Transfers, Social Security and Child Wealth-building

Andria Smythe<sup>1</sup>

### Replication Files

#### Content

This article includes a link to files that will replicate the findings in “Child-to-parent Intergenerational Transfers, Social Security and Child Wealth-building” by Andria Smythe. The following files are included:

1. **code.do** [Stata “do” file was written for Stata *version 15.1*]
2. **FullData.dta** [Stata data file for panel data- Main datafile used]
3. **2013TimeSupplement.dta** [Stata data file for the 2013 Supplement- Used for time transfer variables]
4. **Results** [Folder is for storing results after running **code.do**]

#### Instructions

To replicate the analysis in this article, set the working directory to the same directory as the code, data file, and results folder. Install packages listed in the first section of code. Next, run **code.do**. After, the results will be available in the **Results** folder.

### Intermediate Files

This article utilizes publicly available data from the Panel Survey of income Dynamics (PSID). Before

downloading data for the first time, users must register by completing a short [registration](#) form which includes choosing a username and password that allows them to access the public use data archive. Three different set of data/information were downloaded. First, the Family Identification Mapping System tool was used in the creation of inter-generational data extracts that include information on parents of the focal person. Next, demographic and economic variables were downloaded for the focal person in the child generation and their parents for the years 1999- 2017 and for the 2013 Time use supplement. Data from the full data set are transformed to long/panel form.
